Sustainability

People and planet are our passion

AQ Compute is an enabler of IT decarbonization for our clients and the society, by shaking up the data center sector by building 100% sustainable, Zero emissions state of the art data centers, future-ready for the new technology challenges ahead, including AI.
In AQ Compute, every job is a green hire, the company team itself comprizes knowledge workers who share the passion of a people, planet and profits culture. The AQ Compute Sustainability Leadership masters the skills of tradeoffs to maximize data center performance, lowering the costs of operations, minimising the environmental impact to achieve a sustainability data center standard operating procedure.

We strive to make a positive impact on the world.

Join us on our path to Net Zero

Our path to Net Zero

We are conscious how important it is for our clients to reduce the environmental impact of their activities. We want to help them to achieve their ESG goals by relying on our products and services. We want to exemplify ESG and be enablers of the change.

Our ESG strategy is mainly based on a path to reach Net Zero within the next years to tackle the main challenges that today's world is facing around energy, emissions, water and waste. These are our main planned actions, organized along these main categories:

- Clean energy strategy
- Net Zero design
- Value chain
- MNR (Measure – Neutralize – Report)

At AQ Compute, we believe that one of the first steps to achieving Net Zero is to ensure a clean power supply for our data centers. We aim to leverage the renewable energy development capacity of our parent company, Aquila Group, to provide our data centers and clients with a truly clean electrical supply.

Our aim is to combine data center activities with renewable power developments to:
- Offer competitive PPAs
- Offer the co-location of projects to facilitate direct power connections
- Achieve the 24/7 matched renewable energy objectives of our clients
- Set a standard for green data centers as a cornerstone of an interconnected energy ecosystem

Our commitment to UN SDG

At AQ Compute the UN SDG goals we are prioritizing are (as at October 2023)**:**
